

Engineered Process Systems

ELUTION HEATING FROM ANGLO TO ZADRA

EPS designs and manufactures a full range of elution heating systems. We can design a system to suit your specific needs, be it for an Anglo or Zadra circuit, directly or indirectly heated, gas or oil fuel.

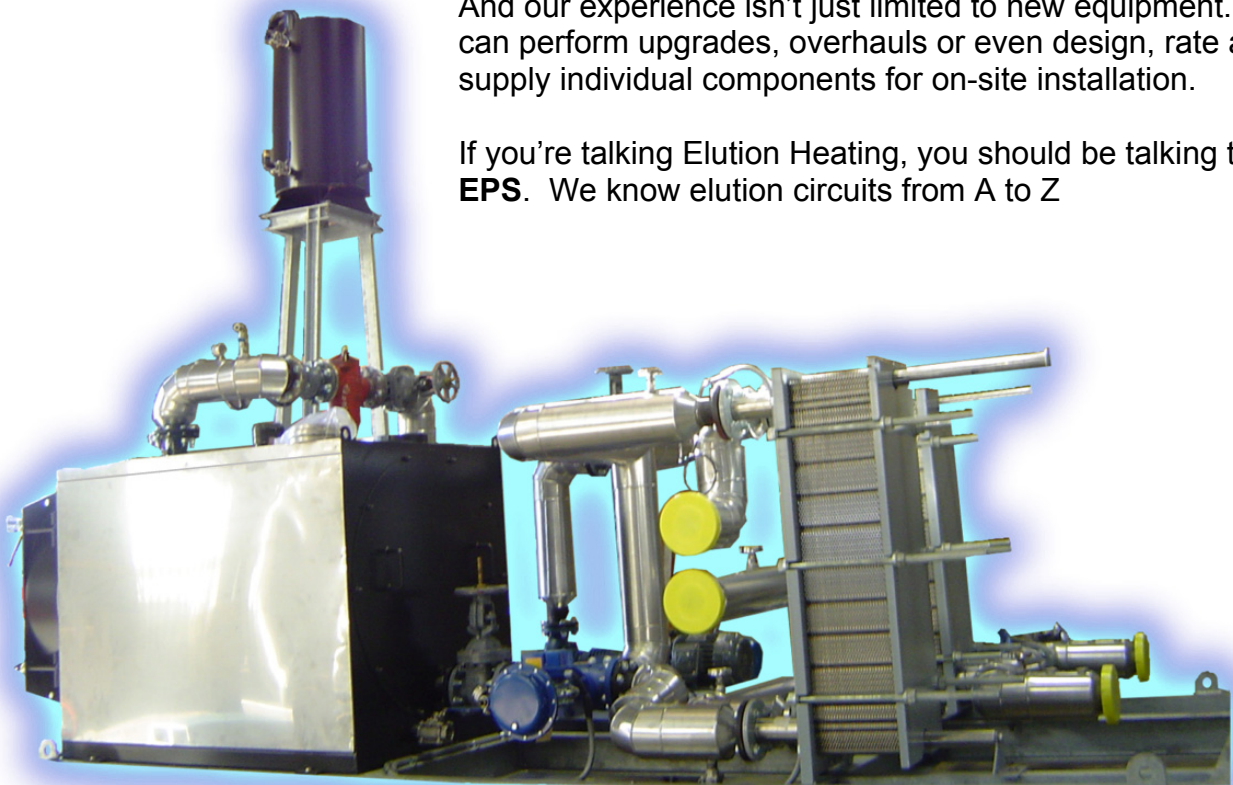

Our designers have many years of experience in the design and installation of Elution Heating Circuits, with installations right around the world.

We take everything into account during the design stage – batch size, heat-up time, effect of step changes – which guarantees you will have a system that performs right through the strip, not just during steady-state operation.

We design systems with capacities from 100 kW through to 2400 kW or more, all arranged for easy transport and installation.

And our experience isn't just limited to new equipment. We can perform upgrades, overhauls or even design, rate and supply individual components for on-site installation.

If you're talking Elution Heating, you should be talking to **EPS**. We know elution circuits from A to Z
